

Dear Hiring Team,

Crafting seamless and secure digital experiences has always been my passion. With two years of professional experience developing intuitive Android and iOS applications and a proven ability to deliver reliable, scalable solutions, I understand the delicate balance between innovation and precision. I'm excited by the opportunity to bring this expertise to Okta, where empowering users with secure yet frictionless access lies at the heart of your mission.

At Simform Solutions, I developed scalable mobile applications, leveraging MVVM and Clean Architecture patterns to improve maintainability and scalability by 30%. My ability to create reusable components and open-source libraries accelerated development cycles, while rigorous testing and debugging reduced app crash rates by 35%, improving user retention. Collaborating with cross-functional teams, I integrated third-party SDKs, such as payment gateways and IoT devices, enhancing feature richness and user engagement.

In addition to my professional achievements, my academic journey—culminating in a Master of Applied Computer Science from Dalhousie University—has equipped me with a strong foundation in software engineering principles and cutting-edge technologies. My experience in leading projects like *ServiceHub* and *SpendWise* reflects my ability to design, build, and deliver user-centric applications that solve real-world challenges.

I am drawn to Okta's commitment to fostering a diverse and inclusive environment while driving innovation in identity management. I am eager to bring my skills in mobile development, problem-solving, and team collaboration to contribute to your mission of redefining secure digital access.

Thank you for considering my application. I look forward to the opportunity to discuss how my background aligns with Okta's vision.

Best regards,

Vraj Shah
