Hiring Team

Mercury

Subject: Application for Mobile Engineering Intern - Summer 2025

Dear Mercury's Hiring Team,

Innovation thrives where curiosity and craftsmanship intersect—and that's exactly where I find my passion as a mobile developer. With over two years of experience building user-focused Android and iOS applications, I specialize in crafting seamless and scalable solutions using Kotlin, Jetpack Compose, and Swift. Mercury's emphasis on mentorship, collaboration, and polished mobile experiences excites me because it aligns perfectly with my love for delivering impactful and thoughtfully designed products.

At Simform Solutions, I developed and shipped several high-performance apps, improving their stability by 40% through optimized code structures and reducing crash rates by 35% with Firebase Crashlytics. Working closely with designers, I ensured a cohesive user experience, which drove a 25% increase in user engagement. I thrive in collaborative environments, where I can exchange ideas and contribute to innovative solutions, all while writing clean, maintainable code that aligns with best practices.

Beyond my technical skills, I'm passionate about taking ownership of projects and learning from seasoned engineers. For example, I led the development of reusable UI components, streamlining delivery timelines by 30% and improving code quality across multiple teams. I'm particularly drawn to Mercury's product ownership culture and the opportunity to work alongside a team with a decade of experience in building exceptional mobile experiences.

I'd love the chance to contribute my expertise to Mercury's mobile engineering team and collaborate on building user-centric, scalable, and polished products. Let's connect to discuss how my background aligns with your goals for this internship.

Thank you for your time and consideration.

Sincerely,

Vraj Shah
