Hiring Team

Equitable

Subject: Application for **Co-op Student - Technology Specialist (Developer)**

Dear Hiring Team,

I am eager to apply for the Co-op Student – Technology Specialist (Developer) role at Equitable. With a strong foundation in Python development, SQL, and cloud technologies, I am passionate about leveraging automation and data-driven solutions to enhance business processes. As a master's candidate in Applied Computer Science at Dalhousie University, I am eager to contribute my technical expertise while further honing my skills in application development and investment technology.

During my tenure as a Software Engineer at Simform Solutions, I developed Python-based applications that automated data processing, reducing manual workload by 50%. I also designed and optimized ETL pipelines, improving data ingestion speed by 40%. My experience in integrating Azure Cloud services and developing API-driven automation solutions aligns well with Equitable's emphasis on scaling cloud-based infrastructure and enhancing investment data analytics.

Beyond technical skills, I thrive in collaborative environments where innovation and efficiency drive results. My ability to analyse data trends, build automation tools, and optimize SQL databases enables me to contribute meaningfully to Equitable's investment technology initiatives.

I am excited about the opportunity to bring my skills to Equitable and collaborate with a team dedicated to process improvement and technological advancement. I welcome the chance to discuss how my experience aligns with the role's objectives.

Thank you for your time and consideration.

Sincerely,

Vraj Shah
