

Dear Hiring Team at Okta,

I am thrilled to apply for the Software Engineer Intern position for Summer 2025. As a Master of Applied Computer Science student at Dalhousie University, graduating in September 2025, I am passionate about building scalable, secure, and user-centric software solutions that align with Okta's mission to revolutionize identity in the digital world.

During my 2 years of experience as a mobile app developer, I honed my skills in object-oriented programming using Kotlin and Swift, building reliable, mission-critical software for Android and iOS platforms. My recent academic projects have further deepened my understanding of cloud technologies and scalable solutions. For instance, I developed a serverless application using AWS Lambda and Step Functions to enhance process automation, Springboot backend application deployed on EC2 using database from RDS in same VPC and different subnet, all automated using CloudFormation and ECR. This project reinforced my proficiency in languages such as Java/Kotlin, as well as web frameworks and RDBMS systems.

What excites me most about Okta is its commitment to innovation, diversity, and empowering users with seamless identity solutions. I am eager to contribute by designing and implementing high-performance software components and engaging in test-driven development. With a strong foundation in agile methodologies and a drive to learn, I am confident in my ability to collaborate with teams across QA, Product Management, and UX to deliver impactful solutions.

I would welcome the opportunity to bring my technical expertise, passion for innovation, and collaborative spirit to Okta's dynamic team. Thank you for considering my application. I look forward to the possibility of contributing to Okta's mission and growing as a software engineer under the mentorship of industry-leading professionals.

Best regards,

Vraj Shah
