Hiring Team

Autodesk

Subject: Application for **Full Stack Software Developer, Intern**

Dear Hiring Team,

Building scalable and customer-centric platforms has always been a passion of mine, and the opportunity to contribute to Autodesk's DXC Horizontal Capabilities team as a Full Stack Software Developer Intern excites me. With a strong foundation in software development and a keen interest in solving complex eCommerce challenges, I am eager to apply my skills in a dynamic environment.

Currently pursuing my Master of Applied Computer Science at Dalhousie University, I have developed projects utilizing Java, Node.js, and Python, strengthening my problem-solving abilities and backend development expertise. My experience with React.js and JavaScript has allowed me to create responsive front-end applications, while my familiarity with AWS, Git, and Jenkins has provided hands-on experience with cloud infrastructure and CI/CD pipelines. Additionally, my coursework in Data Management and Warehousing has enhanced my ability to optimize system performance and scalability.

I am particularly excited about the prospect of collaborating with cross-functional teams, refining project scopes, and working on mission-critical systems such as orders, subscriptions, and compliance services. The opportunity to gain exposure to Autodesk's end-to-end system lifecycle aligns perfectly with my goal of becoming a well-rounded software engineer.

I look forward to the possibility of discussing how my skills and enthusiasm can contribute to Autodesk's mission. Thank you for your time and consideration.

Sincerely,

Vraj Shah
