Hiring Team
Snowflake

Subject: Application for **Software Engineer Intern**

Dear Hiring Team,

Snowflake's mission to build an innovative, cloud-native data platform resonates deeply with my passion for distributed systems and large-scale data processing. As a Master of Applied Computer Science student at Dalhousie University, I am eager to contribute my skills in software development and cloud computing to Snowflake's dynamic team.

My experience includes projects utilizing Java and Python, focusing on optimizing system performance and implementing scalable backend solutions. My coursework in Data Management and Warehousing has strengthened my understanding of database systems, query execution, and transaction processing. Additionally, my familiarity with cloud platforms such as AWS and Google Cloud, along with my proficiency in data structures and algorithms, aligns well with Snowflake's focus areas.

I am particularly excited about the opportunity to work on enterprise-grade software and high-performance distributed systems, where I can apply my technical knowledge while learning from industry experts. The prospect of collaborating with a team dedicated to pushing the boundaries of cloud computing and data warehousing is an exciting next step in my career.

I would welcome the opportunity to discuss how my skills and enthusiasm can contribute to Snowflake's success. Thank you for your time and consideration.

Sincerely,
Vraj Shah
