Hiring Team

IMAX

Subject: Application for **Intern, Software Developer**

Dear Hiring Team,

From the moment I first experienced an IMAX film, I was captivated by the seamless blend of cutting-edge technology and immersive storytelling. As a master's student in Applied Computer Science at Dalhousie University, with a background in Android and iOS development, I am eager to bring my technical expertise and passion for innovation to IMAX's Summer Internship Program.

My experience spans native mobile application development, cloud integration, and performance optimization. I have worked extensively with Kotlin, Swift, and modern software architectures, building applications that prioritize efficiency and user experience. Additionally, my coursework in Deep Learning Applications has deepened my understanding of data-driven analysis, which aligns with the role's emphasis on analysing field data from IMAX projectors to optimize system performance.

Beyond coding, I thrive in collaborative environments where interdisciplinary teams come together to push technological boundaries. The opportunity to work alongside IMAX engineers and designers, learning about cinema-grade projection systems, excites me as it combines my love for software development with my appreciation for groundbreaking entertainment experiences.

I would love the chance to contribute my skills and enthusiasm to IMAX and explore how software, optics, and engineering converge to create unforgettable cinematic moments. I look forward to the possibility of discussing how I can add value to your team.

Thank you for your time and consideration.

Sincerely,

Vraj Shah
